Readme

DocDoc

The goal of this project was to create a script who build a wiki. we start with a list of file in Markdown and we would like to generate a document in Markdown, HTML and PDF.

Sommaire

Requirements

Pandoc

Latex

How to use

Generate for all type (HTML, Markdown and PDF).

make all

Generate for a specific type.

make pdf

make html

make markdown

By default a simple make will generate the document in Markdown.

Graphics

You can choose your own graphics with the CSS file Header.css

I made a simple file for me but feel free to create your own style.

Makefile

You can edit the makefile, you will find two variables in it.

SUMMARY_FILE=01_Summary.md
OUTPUT="Readme"

For the variable OUTPUT do not specify a type because the programme could generate differents types.
